Conclusions on LADWP's Proposed Feed-In-Tariff 50 MW Proposal

- ❑ The OPA supports the FiT50 program, especially the competitive bidding component.
- ❑ When FiT50 contracts come before the DWP Board for approval prior to signature, they should individually include:
 - The two price components bid and proposed for a DWP FiT50 contract;
 - The total Beacon site costs and preparation to date along with the percentage of these costs allocated to the proposed DWP FiT50 contract;
 - Expected additional Beacon site costs and preparation along with the percentage of these costs allocated to the proposed DWP FiT50 ;
 - Estimate total costs and \$/MWh for the FiT50 contract, including site costs.
- ❑ In contrast to the FiT50 program, the first 20 MW tier of LADWP's FIT 100 MW program is creating an additional \$50-75 million burden on LA's customers, a 100% premium over current avoided costs for other renewables.
 - OPA recommends that DWP and the DWP Board re-visit the FiT100 pricing and applicability, especially before opening another price tier in the FiT100 program.
